Let's Decode...

Who is a DevOps Engineer? 🤔🚀

Tip: Whatever is written in this article is the POV of Avyay Pratyush who's an ex-DevOps Engineer in a Product Based Company.

A DevOps engineer is a tech professional who works to connect software development with IT operations. The term "DevOps" merges "Development" and "Operations," highlighting the role's goal of enhancing collaboration and efficiency between these two areas.

What Does a DevOps Engineer Do? 🧑🔧

Automating Tasks: DevOps engineers use tools to automate repetitive tasks in software development, like testing and deployment. This helps save time and reduce errors.

Continuous Integration and Continuous Deployment (CI/CD): They set up CI/CD pipelines to automatically test and deploy code changes. This means new features and fixes can be quickly and reliably added to the main software and released to users.

Infrastructure as Code (IaC): They manage infrastructure (like servers and databases) through code, making setup consistent and repeatable. This automation makes it easier to manage resources.

Monitoring and Logging: DevOps engineers implement systems to monitor and log the performance of applications and infrastructure. This helps quickly identify and fix issues, ensuring everything runs smoothly.

Promoting Collaboration: A key part of their job is to improve collaboration between development and operations teams. This involves setting up tools and processes that encourage communication and teamwork.

Security and Compliance: They integrate security practices into the DevOps process, known as DevSecOps, ensuring that security is a priority at every stage of development and deployment.

Why Are DevOps Engineers Important? 🤔

DevOps engineers are crucial because they help organizations deliver software faster and more reliably. By automating processes, ensuring continuous integration and deployment, and fostering better collaboration, they allow development teams to focus more on creating code and less on operational challenges.

Common Tools Used by DevOps Engineers ⚙️:

- 1) **Version Control Systems:** Git, GitHub
- 2) **CI/CD Tools:** Jenkins, GitLab CI, CircleCI
- 3) **Configuration Management:** Ansible, Chef, Puppet
- 4) **Containerization:** Docker, Kubernetes
- 5) **Cloud Platforms:** AWS, Azure, Google Cloud
- 6) **Monitoring:** Prometheus, Grafana, ELK Stack (Elasticsearch, Logstash, Kibana)

DevOps Project Ideas 💡 : (more than 50 projects) [Projects.](#)

Important DevOps Certifications 🎓: [Certifications List.](#)

Steps to grab a job as a DevOps Engineer for Freshers & Experienced individuals 📅:

Step 1: Build DevOps Skills.

Step 2: Build good projects based on your learning (you can choose the projects from the resources mentioned above)

Step 3: Certify yourself if you are a fresher. Experienced person can also complete their pending certifications.

Step 4: Make your account on LinkedIn & Twitter.

Step 5: Showcase your skills on LinkedIn and Twitter in the form of a post. ([example](#)).

Step 6: Make good connections/networks over LinkedIn & Twitter which will later help you grab internships & jobs easily.

Step 7: When you are ready with your skills, certifications, and projects then start applying on the job portals such as LinkedIn, Naukri, Indeed, Instahyre, Hrist, Wellfound. (apply a minimum 10 jobs per portal per day).

These seven steps will result in life-changing steps.

FAQs 🤔:

Q1. Is programming important for becoming a DevOps Engineer?

A: No. Only basic scripting will perfectly work for you.

Q2. Companies only hire experienced people for DevOps roles.

A: Companies only hire skilled people, doesn't matter if he/she is a fresher or experienced individual.

Q3. Can a Non-IT background individual become a DevOps Engineer?

A: Yes, build skills.

Q4. Salary expectation of a DevOps Engineer.

A: Rs. 5LPA - Rs. 12LPA (source glassdoor)

Q5. Can we learn DevOps for free?

A: Yes
