**Cloud
Computing
Internship**

Cloud Computing Internship

◆ SUB-DOMAIN-SPECIFIC RESPONSIBILITIES

AWS Fundamentals

During this internship, you will learn the core concepts of cloud computing using **Amazon Web Services (AWS)**. You will explore basic services such as compute, storage, and networking, and understand how applications are hosted in the cloud. Tools include **AWS console, EC2 basics, S3 storage, and IAM fundamentals**. You are expected to explain cloud concepts in simple terms and relate them to real-world usage.

GCP Fundamentals

In this subdomain, you will work with **Google Cloud Platform (GCP)** to understand cloud services and architecture. You will learn about virtual machines, cloud storage, and basic service management. Tools include **GCP Console, Compute Engine basics, and Cloud Storage**. Your responsibility is to explain how cloud infrastructure supports scalable applications.

Azure Fundamentals

Here, you will explore **Microsoft Azure** and its core offerings. You will learn about cloud resources, virtual machines, and basic deployment concepts. Tools include **Azure Portal, resource groups, and cloud services fundamentals**. The goal is to help interns understand multi-cloud environments and explain similarities across cloud providers.

DevOps for Cloud (CI/CD Basics)

This subdomain introduces you to **DevOps concepts in cloud environments**. You will learn about version control integration, automated deployments, and CI/CD pipelines. Tools include **GitHub, basic CI/CD workflows, cloud deployment pipelines, and monitoring basics**. You are expected to explain how automation improves reliability and speed in modern software delivery.

Your Internship Journey:

1. Accessing Your Learning Track

- Once your onboarding is confirmed - Log in to EduLinkUp and access your profile
- You will see your selected **domain & subdomain**
- Total modules: **14 modules + 1 Capstone**

2. Working on Modules

- Each module contains:
 - Learning resources (videos, docs, articles)
 - Explain what you learnt in the module and submit a publicly accessible and downloadable Google Drive/Loom link
- Learn first → then create your submission

3. Approval Process

- Even after submission and checkbox mark, the task remains **"Pending"**
- Admin reviews the content
- If approved → module marked complete
- If rejected → you receive feedback & can re-submit

4. Guidance & Support

- You may reach out personally for clarification at any step in your internship. If needed, we will reach out to you too.

5. Capstone Phase

- Choose **1 capstone project** from 25 curated ideas
- Build the project seriously
- Create a new GitHub repository will be created under **EduLinkUp – Developers' Capstone Organisation**, i.e. the Organisation you joined
- Follow clean code & structure

6. **Capstone Explanation** - Record a full screen walkthrough, show your project at first and then the code/tools you used to build it or solve the problem depending upon your sub-domain, explain everything

7. Final Review

- Completion of modules

- Quality of submissions
- Capstone project & explanation

8. Completion & Certification

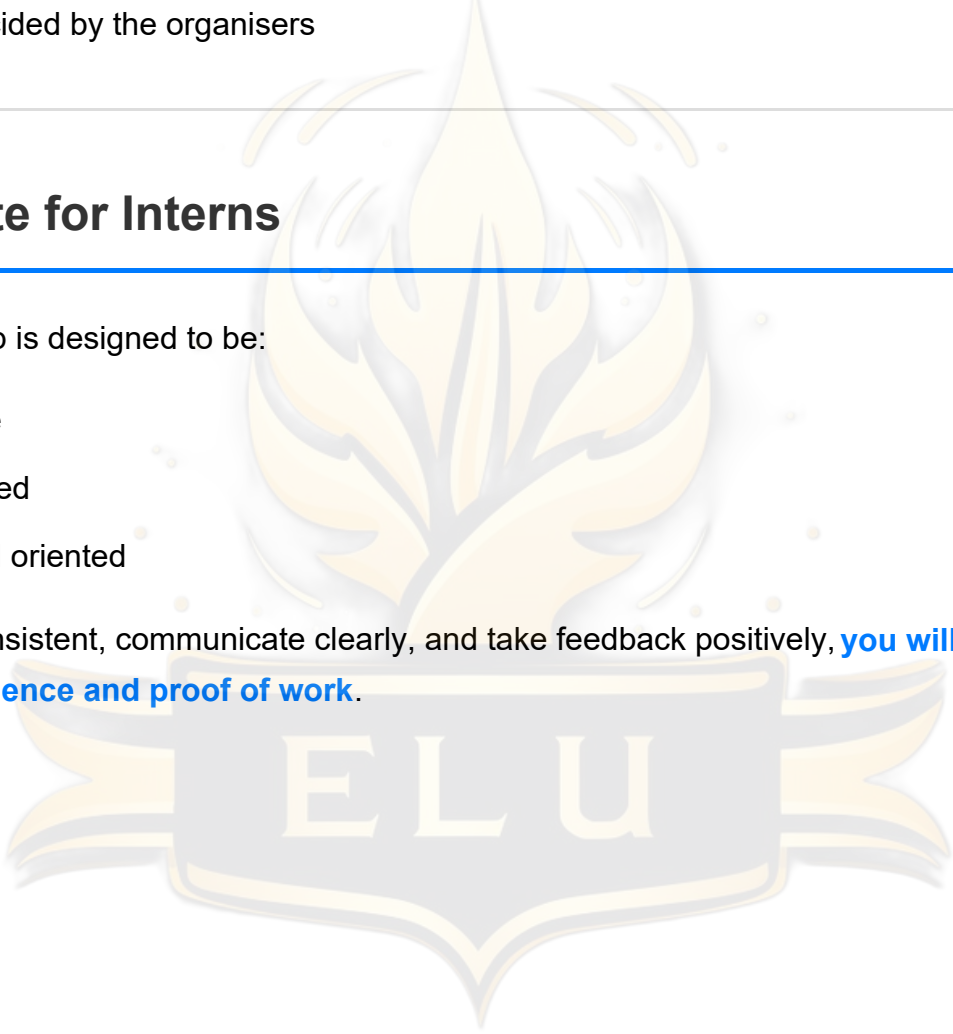

- Share your project walkthrough on LinkedIn and mention EduLinkUp
- Receive:
 - Internship Certificate and public recognition
 - Portfolio-ready work and job-ready skills
 - A chance to work with the core and paid opportunities for top performers - to be decided by the organisers

Final Note for Interns

This internship is designed to be:

- Supportive
- Skill-focused
- Real-world oriented

If you stay consistent, communicate clearly, and take feedback positively, **you will finish with strong experience and proof of work.**
